

Business Analyst Product Master Data (m/f/d)

Temporär Jobregion: Rotkreuz Stellenprozenzte: 100%

Beschreibung

For our international medical partner, **Roche Diagnostics Int Ltd** based in Rotkreuz, we are looking for a qualified and motivated **Business Analyst Product Master Data** for 3 months with option for extension.

Background

The Product Information Management (PIM) team in Roche Diagnostics maintains a repository with structured and unstructured product data (e.g. product name, dimensions, storage conditions, measuring ranges, business area ownership, etc.). This information is used for various commercial purposes (deal calculation, procurement, tendering, marketing website, etc.) by global functions and local country affiliates. Currently, the PIM team is providing this data to internal customers via existing API web services and manual data extracts.

Roche Diagnostics affiliates are using product information for various commercial processes. A typical example: customer reaches out to Roche Diagnostics affiliate and asks to provide a set of data fields for the materials that the customer can buy from Roche. The requests differ depending on the customer. Affiliate colleagues are manually pulling together the data from several IT systems. This manual operation is creating unnecessary effort and creates a possibility for human error.

The PIM team has initiated a project which aims to minimize manual effort in collection and aggregation of product data in order to automatically generate and distribute an electronic product catalog. Internal and external Roche customers choose the products they are interested in and download the desired product information as an on-demand self-service. The project is in need of an experienced business analyst to support the project team by bringing outside expertise.

Tasks

- Live, coach and help the team to embrace the RMD Software principles, values and mindset.
- Coach the team to adopt and apply practices based on the SAFe framework.
- Help the team to develop and live Scrum.
- Establish team dynamics, culture and mindset which enables the team, the art and all team members to reach their potential.
- Remove impediments to the team and team's delivery.
