

Data Warehouse Architect (m/w/d) 80-100%

Fest - Vollzeit Jobregion: Luzern Stellenprozent: 80 - 100%

Beschreibung

Are you a passionate data warehouse expert and would you like to apply your experience to software development?

For our customer, a well known insurance company in central Switzerland, we are looking for a **Data Warehouse Architect** for a permanent position.

Daily Business

- Definition of DWH data architecture and data modeling across all DWH layers (source interface, staging, core, datamart layer).
- Continuous improvement of the DWH data architecture. Definition of a data architecture roadmap according to current and future business and BI requirements in coordination with the product owner and DWH tech lead.
- Define and communicate methodology (3NF, dimensional modeling) and guidelines for data modeling (data modeling patterns, data integration patterns) and historization (bi-temporal, SCD1/2) of data across all DWH layers including DWH metadata management.
- Responsible for the data models in the core, the dimensional domain and for the metadata model
- Responsible for decisions, evaluations and selection of new technologies and tools related to the DWH data architecture
- Coaching in the area of DWH data architecture and data modeling for the DWH /BI team

Must Haves

- Several years of hands-on experience in enterprise DWH and BI data architecture and data modeling.
- Hands-on experience designing an enterprise DWH 3NF core and dimensional model along known data modeling patterns and methodologies
- Knowledge of DWH metadata management and metadata framework implementations for the purpose of quality assurance and automation
- Understanding of data integration implications and requirements from the interface to the reporting, datamart and BI layers including metadata, reference data management and data harmonization
- Experience in using data modeling tools such as ER-Studio or SAP
